66 / 100

SEO Audit — drjawariarasheed.com

Date: 28 October 2026 · **Pages crawled:** 25 (all pages linked from the site and listed in the sitemap) · **Business type:** Local medical practice (gynecology & IUI clinic, Bahawalpur)

SEO Health Score: 66 / 100

Category	Weight	Score
Technical SEO	22%	78
Content Quality	23%	62
On-Page SEO	20%	50
Schema / Structured Data	10%	80
Performance	10%	70
AI Search Readiness	10%	65
Images	5%	70

The site has a strong base: fast cached hosting, HTTPS with HSTS, one H1 per page, long and locally focused service pages (1,100–1,450 words each) and rich structured data (Physician, MedicalClinic, FAQ, breadcrumbs). It is held back mainly by **missing meta descriptions and search titles on every page**, an **empty Blog page**, and **placeholder text** still visible on a few pages.

Top 5 critical issues

1. **No meta description on any page (25/25).** Google writes its own snippet, often from the menu. The plugin stores descriptions for Rank Math, but Rank Math is not installed and the built-in fallback is not reaching the page.
2. **Search titles miss "Bahawalpur".** Pages use the default "Page – Dr. Jawaria Rasheed" instead of the prepared local titles, e.g. "IUI Treatment in Bahawalpur…". About page title repeats the name: "About Dr. Jawaria Rasheed – Dr. Jawaria Rasheed".

3. **Blog page is empty** (/blog/ has no heading and no posts). The three prepared articles are still drafts; the home page "Featured articles" section links to an empty page.
4. **Placeholder text is live:** About ("Add hospital appointments here…"), Privacy Policy ("Draft — please have it reviewed"), Medical Disclaimer ("Last updated: please add the date"). This also appears in /llms.txt, which AI search engines read.
5. **No social sharing tags (Open Graph).** Links shared on WhatsApp/Facebook show no image or proper title.

Top 5 quick wins

1. Install **Rank Math** (free) — it picks up the titles and descriptions already saved for every page, and adds Open Graph tags.
2. Publish the 3 draft articles (after Dr. Jawaria reviews them) so the Blog page and home section have content.
3. Fix the footer **Sitemap** link: it points to /sitemap_index.xml (404); the live sitemap is /wp-sitemap.xml (or keep the link and install Rank Math, which creates /sitemap_index.xml).
4. Replace the placeholder lines on About, Privacy Policy and Medical Disclaimer.
5. Create/verify the **Google Business Profile** for the clinic with the same name, address and number as the site.

Technical SEO — 78

What works: HTTPS with HSTS (1 year), `upgrade-insecure-requests`, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy; LiteSpeed + Hostinger CDN cache (HIT, Brotli, HTTP/3); robots.txt allows crawling and lists the sitemap; every page returns 200 with a self-referencing canonical; no noindex.

Finding	Severity	Fix
Footer "Sitemap" link → /sitemap_index.xml returns 404	Medium	Point to /wp-sitemap.xml, or install Rank Math
Sitemap lists pages only (no posts yet)	Low	Fine for now; posts appear once published
`X-Powered-By: PHP/8.3` and Elementor version in `<meta name=generator>` reveal versions	Low	Hide in hosting/security plugin
17 stylesheets and 15 scripts on the home page (Elementor + Hostinger Reach)	Medium	Enable LiteSpeed Cache CSS/JS combine; disable Hostinger Reach if not used
Not checked: http→https and www→non-www redirects	—	Verify in hPanel (Force HTTPS on)

Content Quality — 62

What works: 12 service pages of 1,100–1,450 words each, written for Bahawalpur and South Punjab, with signs, tests, treatment steps and FAQs; clear doctor credentials (MBBS, FCPS, PGDip) on About, home and every service page; medical disclaimer and emergency advice.

Finding	Severity	Fix
Blog page empty; 0 published articles	Critical	Publish the 3 drafts, then 2–4 articles a month (PCOS, IUI success factors, pregnancy diet, etc.)
Placeholders on About, Privacy Policy, Medical Disclaimer	High	Add real hospital roles, memberships, dates
Testimonials section shows nothing on home and /testimonials/	High	Add real reviews (with permission) or hide the section until then
No "Reviewed by Dr. Jawaria Rasheed, " line on service pages	Medium	Add a reviewed date — strong E-E-A-T signal for medical pages
Gallery, Testimonials, Videos, Contact are thin (~480 words, mostly menu/footer)	Low	Normal for these page types; add photos/captions

On-Page SEO — 50

Finding	Severity	Fix
0/25 pages have a meta description	Critical	Install Rank Math (descriptions are already stored)
Titles don't include "Bahawalpur"/service keywords	High	Same — Rank Math applies the prepared titles
About title duplicates the name	Medium	"About Dr. Jawaria Rasheed — Gynecologist in Bahawalpur"
Home has two identical H2s ("Trying to conceive? Start with clear answers." in slider and section)	Low	Change one wording
Slider slides 2–4 use H2s for banner text	Low	Acceptable; keep
Internal linking good (26 links from home, related services on each page)	—	—

Schema / Structured Data — 80

Present and valid JSON-LD: Physician (credentials, specialties, areas served, sameAs Facebook/YouTube), MedicalClinic + LocalBusiness, BreadcrumbList, MedicalWebPage on services, FAQPage on services/FAQs/Andrology.

Finding	Severity	Fix
No `openingHoursSpecification` (Mon–Fri 15:00–19:00)	Medium	Add to clinic schema
No geo coordinates	Medium	Add latitude/longitude from the Google Maps pin
hasMap URL broken: "House No. 11" (the "1/1" slash was lost)	Medium	Paste the real Google Maps share link in Clinic Info
Physician `image` is the logo, not Dr. Jawaria's photo	Low	Use the doctor photo
No `aggregateRating`	Info	Only add once real Google reviews exist — never invent ratings

Performance — 70

Lab measurements from one visit (cached): server response 208 ms, CLS 0.005 (excellent), page HTML 44 KB compressed, images in WebP. LCP could not be measured reliably from this test browser (it ran in a background tab). Watch the 32 CSS/JS files from Elementor. Run PageSpeed Insights on the live URL after launch for real Core Web Vitals.

Images — 70

All content images have alt text where needed; banner slider images use empty alt (decorative) — acceptable, but descriptive alt on slides 1–4 would help image search. Images are WebP and lazy-loaded below the fold. YouTube thumbnails use empty alt — titles are next to them, fine.

AI Search Readiness — 65

What works: FAQPage schema on 14 pages, clear question-style headings, credentials and locations in schema, /llms.txt present.

Finding	Severity	Fix
/llms.txt shows "&" and the placeholder "Last updated: please add the date"	Medium	Fix the placeholders; check which plugin serves llms.txt (the clinic plugin's own version has clinic details and timings)
No reviewed/updated dates on medical content	Medium	Add "Reviewed by … on …"
Brand mentions off-site unknown (directories like Marham, oladoc, Google Business Profile)	Medium	List the clinic on Marham/oladoc with the same NAP

Local SEO notes

Name, address and WhatsApp number are consistent across header, footer, Contact and schema. Next: Google Business Profile (category "Gynecologist", hours, photos, booking link to /book-appointment/), and reviews there.

Not checked: real-user Core Web Vitals (no Google Search Console/CrUX access), backlinks, rankings, http/www redirects, and the reCAPTCHA keys on the booking form.

Action Plan — drjawariarasheed.com (SEO score 66/100)

Critical — this week

1. Install and activate **Rank Math SEO** (free). It uses the titles and descriptions already saved on every page and adds Open Graph tags and /sitemap_index.xml. *(Fixes missing meta descriptions, local titles, OG, footer sitemap link.)*
2. Review and **publish the 3 draft articles** so the Blog page is not empty.
3. Remove placeholder text on **About, Privacy Policy, Medical Disclaimer** (real hospital roles, memberships, "Last updated" date).

High — within 2 weeks

1. Add **real testimonials** (patient permission ticked) or hide the testimonials section until you have them.
2. Create/verify the **Google Business Profile**: category Gynecologist, Mon–Fri 3–7 pm, WhatsApp number, website and booking links, photos.
3. Paste the **real Google Maps share link** in Settings → Clinic Info (current link loses the "1/1").
4. In Rank Math, set the About title to "About Dr. Jawaria Rasheed — Gynecologist in Bahawalpur".

Medium — within a month

1. Add opening hours and map coordinates to the clinic schema.
2. Add "Reviewed by Dr. Jawaria Rasheed on " to each service page.
3. Turn on LiteSpeed Cache (CSS/JS minify + combine); disable Hostinger Reach if not used.
4. Add Google reCAPTCHA keys in Clinic Info (booking form spam protection).
5. Register Google Search Console + Bing Webmaster Tools and submit the sitemap.
6. List the clinic on Marham and oladoc with the same name, address and number.

Ongoing

1. Publish 2–4 articles a month on topics patients search (PCOS diet, IUI success, pregnancy tests, period pain).
2. Ask happy patients for Google reviews; reply to every review.
3. Re-run this audit monthly; compare with today's baseline.
